

ArterioSustain

Allied BioNutrition Corporation | www.AlliedBioNutrition.com

ArterioSustain contains Allied BioNutrition's proprietary Flavonoids root extract in a high daily dose of 200mg per capsule. This powerful antioxidant has been clinically validated to reduce oxidation of LDL Cholesterol by as much as 55%. LDL can be oxidized because of a wide range of lifestyle and medical factors, including being overweight, smoking and stress. Today, it's a known scientific fact that oxidized LDL accumulates in the arteries over time with significant impact on arterial health and blood circulation, as well as other cardiovascular health parameters.

PRODUCT HIGHLIGHTS

- Promotes cardiovascular and arterial health
- 200mg powerful antioxidant Flavonoids extract from the Polyphenol family
- Reduces Oxidized LDL Cholesterol by as much as 55%
- Clinically validated for reduction of accumulated oxidation in the arteries
- World-class biotechnology
- GMP certified manufacturing, non-GMO, FDA approved
- 30-day supply

HOW DOES ARTERIOSUSTAIN PROMOTE CARDIOVASCULAR HEALTH

ArterioSustain is our uniquely formulated natural antioxidant Flavonoids Root Extract promoting cardiovascular health and blood circulation in the arteries through reduction of LDL cholesterol oxidation and improved IMT levels. Intima-Media Thickness (IMT) is a measurement of the thickness of tunica intima and tunica media, the innermost two layers of the wall of an artery.

In April 2016, the results from Allied BioNutrition's 1-year, 94-person, double-blind, placebo-controlled study were published in the scientific journal *Food and Nutrition Research*. The study examined the effect of our unique Flavonoids Root Extract, at a daily dose of 200mg, on the thickness of the arterial wall using CIMT (carotid intima-media thickness) measurements in individuals with oxidation in the arteries. CIMT is considered a strong biomarker of overall cardiovascular and arterial health. The results of this clinical trial were extremely compelling. Following one year of Allied BioNutrition's Flavonoids root extract consumption by 94 participants, mean CIMT, total cholesterol, LDL levels, and blood pressure decreased. This clinical trial suggests that consumption of Allied BioNutrition's unique extract exhibits particular resistance against the development of oxidation and of related cerebral vascular issues.

After years of research and clinical trials, Allied BioNutrition was able to demonstrate and clinically validate the high efficacy of its extract biotechnology on reduction of LDL cholesterol oxidation, as well as its positive impact on arterial health. This includes reduction of IMT in the arteries and improvements in a wide range of other cardiovascular parameters that are critical to our health.

Certain cardiovascular health indications of Allied BioNutrition's extract biotechnology have been patented in the USA.
